Abstract

The National Survey of Prosecutors is a survey of chief prosecutors in state court systems. It was previously conducted in 1990, 1992, 1994, 1996, and 2001 (ICPSR 9579, 6273, 6785, 2433, 3418 respectively). For 2001, instead of a survey of chief prosecutors, a census of all 2,341 chief prosecutors who handled felony cases in state courts of general jurisdiction was conducted. In 2005, the sampling frame, consisting of 2,400 prosecutorial districts that handle felony cases, was compiled by the

- Study 4600 -

Bureau of the Census, along with the 2004 population figures. From this file the Census Bureau drew a stratified systematic sample. The 2,400 prosecutorial districts were grouped into 5 strata, based solely on the population parameters. Within each stratum, districts were systematically selected for the sample. A sample of 310 districts was chosen that is expected to yield a coefficient variation of about 2 percent for variables correlated with population and arrests. A questionnaire was mailed to the chief prosecutor of each district, of which 307 responded.

A chief prosecutor is an official, usually locally elected and typically with the title of district attorney or county attorney, who is in charge of a prosecutorial district made up of one or more counties, and who conducts or supervises the prosecution of felony cases in a state court system. Prosecutors in courts of limited jurisdiction, such as municipal prosecutors, were not included in the survey. The census' purpose was to obtain detailed descriptive information on prosecutors' offices, as well as information on their policies and practices. Variables cover staffing, funding, special categories of felony prosecutions, caseload, juvenile matters, work-related threats or assaults, the use of DNA evidence, and community-related activities, such as involvement in neighborhood associations. The unit of analysis is the district office.
